

Nano-Feed additives:

We develop and produce nanomaterials as calcium and phosphorous source for feed additives to improve the metabolism efficiency, increase the growth rate and weight gain, increase the growth rate and increase bone density of poultry

Nanomaterials for Agricultures:

Nanotechnology can play an important role in the future of agricultural field for example: plant germination and growth, plant protection and production, pathogen detection, fertilizers and food processing and packaging.

All the synthesized nanomaterials are provided with a specification sheet, including a full description of the product.

Nano Gate Services

Nano-Gate is a well-established firm that provides a variety of scientific services as well as, commercialization of an innovations ideas.

Nanonaterials

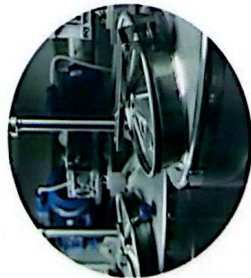

Custom formulations

Consulting

Traning & workshops

Industrial Services

Our Products

Nano Gate offers different types of nanomaterials in small quantity (grams) for researchers and in bulk order for small and large industries (Kilograms).

Products list :

Metal Nanoparticles

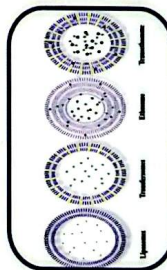

Bio-Nanomaterials

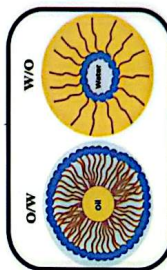

Carbon-Based Nanomaterials

Metal Oxides Nanoparticles

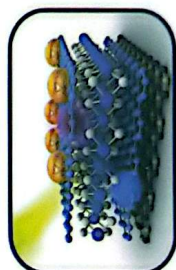

Lipid-based nanomaterials

Nanoemulsions

Nano-Drug Formulations

Nano-composites

Custom formulation

Nano Gate develops functional nanomaterials for our customer's needs for different applications.

Our Projects

Nano-Biomedicine:

Biomedical applications of nanotechnology include drug delivery, hyperthermia, Wound healing, bioimaging, and biosensors.

Nano-Density:

Nanotechnology has revolutionized the field of dentistry with tremendous potential to provide a comprehensive oral health care using the nanomaterials, advanced clinical tools and devices.

Industrial Waste water treatment:

We have a solution for treatment of industrial waste water Based on the nanotechnology to eliminate the toxic heavy metals, organic matters and suspended materials to avoid the environmental hazardous.
